

Skeena Gold & Silver

TSX: SKE; NYSE: SKE

Price Target C\$51.41 | Implied Upside: 33.90%

Prices Last Updated: March 29, 2026

SKEENA
GOLD + SILVER

Deck Overview

Company Overview

- Skeena is a **development-stage** metals company with **one** core asset, Eskay Creek, and a market capitalization of **C\$4,674M**
- The company maintains a **net cash position** and has secured **US\$750M** in project financing from Orion Resource Partners
- The Orion Resources Partners stake in Skeena is **minimal**, meaning a **shareholder lockout** is unlikely to prevent refinancing
- Eskay Creek is a **high-grade**, high-throughput asset located in a **Tier 1 jurisdiction** with **full permits** in hand

Industry Overview

- Skeena's **Eskay Creek** mine is located in the **Golden Triangle** region of British Columbia, **Canada**
- This is a **Tier 1 jurisdiction** home to some of the world's most **prominent, high-grade gold, silver**, and copper deposits
- Mining projects are supported by the local government, and the **social risk** is mitigated by an agreement with the **Tahltan Nation**
- **Gold prices** have seen stagnation from **2021-2024**, but a **rally** in the prices following several **macro tailwinds** through **2025-26**

Investment Thesis

- Skeena is **2 years** from commercial production in a **Tier 1 jurisdiction** with some of the **highest quality ore grades** in the world, **positioning** itself perfectly for an **acquisition** as gold **majors** look to **consolidate** around **similar assets**
- Skeena originally completed its **definitive feasibility study (DFS)** in **2023**, with a long-term (LT) **gold price** of **US\$1,700/oz**
- Since then, the **LT gold price** has moved to **US\$3,150**, lowering **cutoff grade** and enabling **M&I conversion**

Valuation

- **P/NAV, EV/Reserves, and EV/Resources** valuation metrics were used for the **comparable company analysis**, while only a **P/NAV** metric was used for the **precedent transactions analysis**
- Both **methods** revealed a **valuation gap** between the company's **current price** and its **implied net asset value (NAV)**
- The **NAV** model ran using price assumptions for a **base, bull, and bear** case based on **bank estimates** for **future prices**
- All other figures including **production schedule, cost schedule**, and anticipated **overhead** were taken from the **DFS**

Risks & Catalysts

- Successful **CapEx execution** is critical to maintaining **upside potential**, while **cost overruns** represent the primary **downside risk** to project economics
- Reaching **commercial** and **nameplate** production on **schedule** would serve as **key re-rating catalysts**
- A **USD rally** or **softer precious metals prices** would **compress valuations**, though persistent **geopolitical uncertainty** is likely to sustain safe-haven **demand** for gold and silver

Recommendation

- Both the **comparable company analysis** and **precedent transactions analysis** evaluated Skeena's value on a **P/NAV** basis to its **peers**, while a **select broker summary** revealed that our price target is comfortably **within consensus**
- The final **NAV** model was used for **most** of the **valuation**, and took the highest weight as it most accurately **blends** both **forward commodity price** estimations with Skeena's **technical report** expected project economics
- We recommend a **Buy** on Skeena with a price target of **C\$51.41** and an implied upside of **33.90%**

Skeena Gold & Silver Overview

Canada's next high-grade, low-cost gold-silver producer

Company Overview

- A Canadian mining company driving gold and silver development in the Golden Triangle of British Columbia
- Eskay Creek:** Skeena's flagship asset; a high-grade deposit previously operated as an underground mine from 1994-2008
 - Estimated silver by-product will surpass many primary silver mines
 - Reserve mix: 65% gold; 35% silver
 - Fully permitted a/o February 2026 → first pour anticipated in 2027
- Snip Deposit:** Past-producing underground mine that produced 1.1 Moz Au between 1991-1999
 - Serves as a 'satellite deposit' to Eskay Creek's production profile
 - Resource statement → 823koz Au indicated, 114koz Au inferred

Fully permitted, financed, and ~45% constructed, Eskay Creek is one of the highest-grade open-pit gold projects globally

Sources: Bloomberg, Company Filings

Mine Overview

Eskay Creek is a world-class gold/silver asset with 39M tonnes of P&P processing 3Mtpa and growing to 3.5Mtpa in 2032

Eskay Creek Overview

World-Class History

- 1994-2008: produced 3.3Moz Au and 160Moz Ag at exceptional grades (45 g/t Au, 2,224 g/t Ag)

Restart Upside

- Restart is targeted for 2027, with higher gold prices lowering the economic cutoff grade and supporting potential reserve expansion

Low-Cost, High-Quality Mine

- The feasibility study outlines 39M tonnes at 2.6 g/t Au and AISC of US\$687 per oz AuEq, positioning the project as a high-margin asset in a Tier 1 jurisdiction

Mine Life: 12 years

P&P: 4.6M oz AuEq

Proven Reserves:
80%

Production & AISC¹

Resources and Reserves & Map of Operations

¹Prices in USD not converted into CAD as so to maintain the original value of the figures presented in the technical report

Skeena Stock Price Analysis

As a development-stage gold producer, Skeena offers leveraged upside to rising gold prices

Event	Explanation	Impact
1 QuestEx Gold & Copper Acquisition	- Skeena acquired QuestEx for C\$48.6M in a mix of stock and cash, expanding its Golden Triangle land package - Skeena concurrently divested non-strategic QuestEx assets to Newmont (C\$27M), funding the cash consideration while retaining only properties adjacent to Eskay Creek and Snip	↓
2 Powell's Jackson Hole Speech	Powell's Jackson Hole speech signaled a dovish pivot toward employment, triggering a global flight to safe-haven assets. As a high-beta gold developer, Skeena was a direct beneficiary of the resulting rally in gold and precious metals equities	↑
3 Early Warning Report Disclosed	- A major German investment firm, triggered an Early Warning Report disclosing a ~9.5% stake in Skeena - Deutsche Balaton's position signals strong institutional confidence in the Eskay Creek project and drove a notable increase in trading volume	↑
4 Impact Benefit Agreement Signed	The Tahltan Nation voted in favor of the Impact Benefit Agreement with Skeena, consenting to the project's operations and establishing a framework to streamline production while supporting local economic development	↑

Despite trading at a P/NAV of 0.61x, Skeena's fully permitted status and macro tailwinds reduce downside risk ahead of construction

Sources: Bloomberg, Capital IQ, Company Filings

Industry Overview

Skeena's Eskay Creek project is in one of the best mining jurisdictions in the world

Industry Trends

Commodity Price Appreciation

- A wave of valuation uplift driven by rising commodity prices has triggered significant capital markets activity in the metals & mining space

"Safe Haven" Jurisdictional Pivot

- Rising resource nationalism amid geopolitical uncertainty is driving a revaluation toward assets in safer jurisdictions

Major Producers Portfolio Consolidation

- Depleting reserves and asset scarcity are driving gold majors to consolidate around Tier 1 assets while divesting non-core assets through M&A

The precious metals industry is currently characterized by **rising commodity prices**, **increasing resource nationalism** and **geopolitical uncertainty**, inciting capital markets activity from major producers with a **focus on safe jurisdictions**

Canada Risk Overview

Risk Type	Level	Explanation
Jurisdiction	Tier 1	High mineral potential, stable policies, and low geopolitical risk
Regulatory	Low	Transparent procedures and political support
Social	Low	IBA signed with Tahltan Nation
Tax/Fiscal	Medium	Tax basis includes provincial (12%), federal (15%), and BC mining tax (13%)

Map of Jurisdiction

Eskay Creek's is in a Tier 1 Canadian jurisdiction with all required permits, materially de-risking the project

Sources: Bloomberg, BC Government News

Gold Spot Price (US\$/oz)

Gold has seen a massive bull run over the past year, after years of being confined to a range

Event	Explanation	Impact
1 Federal Reserve Ends Rate Hiking	The Federal Reserve's December 2023 pivot was confirmed by the January press conference, where the board projected three rate cuts in 2024, reduced the opportunity cost of holding non-yielding assets like gold, triggering a broad sector rally	↓
2 Liberation Day	The US imposed tariffs on almost every major trading partner worldwide, overnight shifting the global economic outlook and driving investors to rally behind gold, a safe-haven alternative to the now less valuable US dollar	↑
3 Fed Pressure and Cuts	The Federal Reserve cut rates by 25 bps three times in 2025, lowering the federal funds target range to 3.50%–3.75%, decreasing the yields on bonds, and driving investors towards other store-of-value assets, such as gold	↑
4 Kevin Warsh Appointment	Trump chose to appoint Kevin Warsh as the next chairman of the Federal Reserve, beating out more dovish candidates such as Kevin Hassett and Chris Waller, causing investors to shift their assets away from gold and into bonds, as they perceived rates to stay higher than previously expected	↑

Gold has shown strong price velocity in the past year, increasing M&A, producer valuations, and the economic viability of projects

Sources: Bloomberg, Capital IQ

The Market is Missing Crucial M&I Conversion...

Eskay Creek's 2023 DFS was built on a pre-rally commodity deck, understating today's reserve conversion potential

Commodity Price Re-Rating

Commodity prices increased materially after the original FS, leading to a **higher LT gold price** and a **lower cutoff production grade**

Increased Economic Viability

Prices (US\$/oz)	DFS	Model	% Increase
Gold	\$1,700	\$3,150	85%
Silver	\$23	\$42	83%

- Skeena's **Definitive Feasibility Study (DFS)** understates today's economics
 - Published before the recent re-rating in precious metals, the FS reflects a much weaker long-term commodity backdrop than today'
- Re-rated prices** support reserve conversion
 - Higher long-term gold and silver prices improve mine economics, lower the cutoff grade, and increase future reserve conversion
- In addition to increasing upside, a stronger price deck cushions CapEx pressure and improves funding visibility

Relative Reserves Table Indicates Eskay Creek as a Premium Asset

Category	Total Measured + Indicated				Total Proven + Probable			
	 BELLEVUE GOLD		 MINING VENTURES	 SKEENA GOLD + SILVER	 BELLEVUE GOLD		 MINING VENTURES	 SKEENA GOLD + SILVER
Tonnes (000)	10,900	58,430	171,426	50,078	8,570	52,000	126,339	39,843
AuEq (g/t)	9.0 ¹	2.2	1.7	3.4	4.7 ¹	2.1	1.6	3.6
AuEq Oz (000)	3,100	5,000	9,165	5,545	1,290	3,492	6,516	4,569

Commodity price uplift will trigger a post-production cutoff re-rating

Sources: Capital IQ, Technical Reports

¹Bellevue operates an underground mine, resulting in significantly higher grades but lower overall tonnage

...Driving Untapped Upside Potential

Despite materially stronger economics, Skeena appears valued on its existing reserve case

Market Mispricing

Valuation Understatement

- Anchored to current reserves, with conversion upside largely unpriced

Low Execution Risk

- Upside driven by already-defined in-pit material

Conversion Enhances Project Quality

- Implying both upside and de-risking are underappreciated

Market Still Anchors to Old Economics

Current P/NAV	0.61x
Peer Median P/NAV	0.83x
PTA Median P/NAV	1.10x

Current trading levels appear to value Skeena on its **existing reserve case** while **reserve-conversion upside** offers untapped value

Cash Flow Impact (C\$M)

M&I conversion increases NAV by **\$1,137M** or **14.09%**

Cutoff Grade Decrease and M&I Conversion

Cutoff Grade Re-Rating

Parameter	Units	DFS	Model	Δ Change
Gold Price	US\$/oz	\$1,700	\$3,150	85.3%
Silver Price	US\$/oz	\$23	\$42	82.6%
Resource Cutoff Grade g/t AuEq		0.70	0.38	-46.0%

M&I to P&P Conversion

	Tonnes (kt)	AuEq koz	% of M&I
Total M&I (OP)	50,078	5,545	100%
Total P&P Reserves	39,843	4,569	79.6%
Unconverted Gap	10,235	976	20.4%
Converted ¹ (Cutoff Δ × Gap)	4,710		9.41%

A sustained increase in LT commodity prices lowers the cutoff grade and results in a NAV increase of 14.09%

Sources: Capital IQ, Technical Report
¹Cutoff calculations assumed linear ore grade

The Market is Missing Acquisition Potential...

As majors are flush with cash, Skeena stands out with a world-class asset in Eskay Creek

Potential Acquirers

Company	Net Cash (C\$B)	Notable Acquisitions
 Newmont	\$3.72	Newcrest Mining (2023, US\$13.66B)
 AGNICO EAGLE	\$3.50	O3 Mining (2025, C\$132M)
 BARRICK	\$2.05	Hercules Silver Corp (2023, C\$23.4M)
 GOLD FIELDS	(\$1.97)	Osisko Mining (2024, C\$1.83B)

Potential Acquirers 5-Year Relative Performance

Precedent Transactions and Acquisition Thesis

Target Company	Trans Date	Domicile	Premium	P/NAV	Market Cap (C\$M)
 GOLD ROAD RESOURCES	Sep-25	AUD	14%	1.10x	\$2,769
 OSISKO MINING	Oct-24	CAD	55%	0.96x	\$934
 DE GREY MINING LTD	May-25	AUD	41%	1.10x	\$2,565
 PRETIVM PVG TSX/NYSE	Mar-22	CAD	24%	1.50x	\$2,827
	N/A	CAD	N/A	0.61x	\$4,674

Thesis Breakdown:

- Gold M&A momentum is strong, with **majors** consolidating around **Tier 1, high-grade, high-production** assets
- AEM, NEM, and ABX** have cleaned up their **balance sheets** and are primed for acquisitions
- Gold price **appreciation** has created a **P/NAV** valuation gap relative to **precedent transactions**
- With all **permits** secured and **commercial production** targeted for mid-2027, **idiosyncratic risk** is significantly **de-risked**

Sources: Bloomberg, Capital IQ

...To Drive Immediate Price Re-Rating

Skeena's turbulent history, paired with major-backed support, creates immediate upside

Potential Acquirers

Newmont

Jurisdiction³	>95% Tier 1	~75% Tier 1	~55% Tier 1	B.C. (Tier 1)
P/NAV¹	1.45x	1.20x	0.90x	0.61x

Skeena is a great acquisition target as its profile aligns well with majors' portfolios

Skeena's Turbulent Management Track Record

Year	Relation	Result
2025	Chairman	Sale of past-producing Anyox Copper exploration zone to TDG Gold
2022	Chairman	Sale of exploration-stage Virginia Energy Resources to Consolidated Uranium
2014	CEO	Veris Gold Corp. delisted in 2014 after becoming insolvent from mine failures and low gold prices
2014	CEO	Colossus Minerals became insolvent after spending ~\$300mm on mine development

Immediate Upside

A major acquiring Skeena would trigger an immediate re-rating to the upside

Skeena's production and AISC profile perfectly align with majors' objectives, and would create immediate upside value for sha reholders

Sources: Analyst Reports, CFAC models, Company Filings
¹Based on analyst reports, except for Skeena, which is based on our model

²2025A production and AISC figures for current producers
³Based on broker NAV-weighted jurisdictions

Acquisition Synergies & Integration Plan

Unlike traditional M&A, mining deals offer a differentiated set of synergies, with upside driven primarily by assets rather than cost efficiencies

Mining M&A

Geographic/Operational Synergies

- Value in mining deals is often derived from proximity of assets, as existing infrastructure can be shared to reduce project CapEx

Limited Corporate Cost Synergies

- Mining is an asset-heavy industry, and the bulk of costs is attributable to Capex, meaning headcount reduction cost savings largely immaterial

Reserve & Development Optimization

- As mines deplete reserves, M&A enables majors to replenish resource base, extending mine life and enhancing long-term production profiles

Mining M&A synergies are **asset-driven** rather than cost-driven, with value primarily derived from **geographic** consolidation and **reserve** optimization

Orion Refinancing Synergy

Eskay Creek Ramp-Up Timeline

A major's acquisition of Eskay Creek would enable reserve expansion and support production backfill

Sources: Bloomberg, Capital IQ, Company Filings, Technical Report

CCA & PTA

As a pre-production developer, Skeena trades at a discount to P/NAV but a premium to EV/Materials relative to peers

Will Commodities Sustain Prices?

Sustained commodity strength battles dollar appreciation to drive Skeena's long-term economics

Catalysts

Risk Heat Map

Risk	Mitigation
1 Sustained Rally in the US Dollar	- A stronger USD leads to a global appreciation of dollar-denominated assets, reducing the relative value of gold and silver - Investors may rotate from gold into USD as the world's reserve currency reasserts its safe-haven status - A stronger USD inversely lowers CAD-denominated input costs, partially offsetting revenue losses - Eskay Creek's industry-leading low AISC provides a buffer against margin compression
2 Softer Gold/Silver Price Environment	- Lower prices reduce project economics, normalize valuation, increase the cutoff grade, and decrease exploration upside Long-term gold prices have risen from US\$1,700/oz to US\$3,150/oz, reducing exposure to short-term spot price volatility - A depressed valuation increases the likelihood of Skeena becoming an attractive acquisition target, providing a valuation floor
3 Project CapEx Inflation	Capital expenditure overruns would drive higher AISC and reduce the probability of favorable debt refinancing conditions Inflation-driven cost increases typically coincide with broader commodity price appreciation, as investors seek hard assets over inflation-eroded alternatives, potentially generating an outsized uplift in revenue relative to cost increases - The \$100M Orion cost overrun facility provides a dedicated buffer against unexpected capital expenditures

Achievable catalysts and well-mitigated downside risks create an asymmetric upside skew in Skeena's valuation

Source: Company Filings

Recommendation: Buy

A range of valuation methodologies common to development-stage miners was applied to value Skeena

Valuation Summary

Sensitivity Analysis

Bias Analysis by Source

Source	Goal	Interpretation	Credibility
Equity Research Reports	Professional Neutral Opinion	Neutral analyst research with structured valuation and forward-looking commentary	5/5
News Reports	Public-facing market Updates	Aggregated summaries which show market narrative rather than expert view	2.5/5
SEC Filings	Formal disclosure of operating performance	Mandatory regulatory disclosures providing standardized financial data with legal accountability, though complexity can obscure key risks	5/5
Press Releases	Announce material Events	Company-controlled messaging with positive framing and selective emphasis	2.5/5
MD&A	Management's narrative explanation of financial results	Forward-looking commentary written by management; useful for strategic context but inherently optimistic and subject to selective disclosure	4/5
Other	6-K, Fiscal Reports, Company Presentations, etc.	Heavily neutral, sometimes biased reporting sources	3.5/5

Skeena's sentiment is strongly positive, with high-conviction signals across 1,300+ data points, especially from news and equity research

Sources: Analyst Reports, Bloomberg Document Search, Company Filings, SEC

¹Signal strength is the confidence level of the net sentiment score

²See Appendix XIII for an in-depth explanation of how this analysis was conducted

NAV - Economic Assumptions

BASE CASE ASSUMPTIONS			
Parameter	Units	Value	Relevance to NAV Model
Gold Price	US\$/oz	3,150	Drives gross gold revenue; key sensitivity variable in NAV
Silver Price	US\$/oz	42	Drives silver by-product credits, reducing net cash costs
Exchange Rate (US\$/C\$)	US\$/C\$	0.74	Converts C\$ costs to US\$ for revenue/cost reconciliation
Discount Rate	%	5%	Taken as a sum of project discount rate (5%)
Royalty (NSR)	%	2%	Deducted from gross revenue to arrive at net revenue
Strip Ratio (waste:ore)	x	7.98:1	Impacts mining cost per tonne; higher ratio = more waste moved
Grams per Troy Ounce	g/oz	31.1035	Converts grade (g/t) × tonnes to troy ounces for contained metal calculations
PRODUCTION & METALLURGY			
Parameter	Units	Value	Relevance to NAV Model
Processing Life	years	12	Determines number of years of cash flows to discount
Throughput (Years 1–5)	Mtpa	3.0	Sets annual ore tonnage in early years → drives revenue timing
Throughput (Years 6–12)	Mtpa	3.5	Sets annual ore tonnage in later years; higher throughput boosts output
Avg Diluted Au Grade	g/t	2.6	Multiplied by throughput and recovery to calculate gold ounces produced
Avg Diluted Ag Grade	g/t	68.7	Multiplied by throughput and recovery to calculate silver ounces produced
Gold Recovery (to concentrate)	%	83%	% of gold in ore recovered to concentrate; directly scales gold output
Silver Recovery (to concentrate)	%	91%	% of silver in ore recovered to concentrate; scales silver by-product credit
LOM Gold Production	koz	2,769	Total gold ounces over mine life; basis for LOM revenue calculation
LOM Silver Production	koz	80,052	Total silver ounces over mine life; drives cumulative by-product credits
LOM AuEq Production	koz	3,891	Gold-equivalent total production; used for co-product cost metrics
LOM Avg Annual Au Production	koz/yr	228	Annual gold output benchmark; revenue run-rate indicator
LOM average annual silver production (koz)	koz/yr	6,583	Annual silver output; feeds annual by-product credit calculation
LOM Avg Annual AuEq Production	koz/yr	320	Annual AuEq output; used to derive co-product cost per ounce
CAPITAL EXPENDITURES			
Parameter	Units	Value	Relevance to NAV Model
Pre-Production Capex	C\$M	713	Upfront build cost; deducted from NAV as PV of remaining capex
Expansion Capex	C\$M	9	One-time expansion spend; adds to total capex in year incurred
Sustaining Capex	C\$M	561	Annual maintenance capex; included in AISC and deducted from FCF
Closure Costs	C\$M	175	End-of-life reclamation cost; deducted from final-year FCF
Initial Working Capital	C\$M	43	Pre-production ore stockpile; deducted from NAV as PV of working capital outflow

Extended Production Uplift

Eskay Creek would see a material production uplift if they are able to convert M&I into P&P

Gold Production (oz)

Silver Production (oz)

Over the LOM, Skeena would produce an additional **336 koz Au** and **9,765 koz Ag**

Relative Financing Structures

Most gold developers target significant re-rating upon reaching production, leading investors to favor equity over debt exposure

Skeena's Capitalization Breakdown

Select Comparables Capitalization¹

Skeena maintains a capitalization structure in line with industry peers

Sources: Capital IQ, Company Filings

¹Skeena's capitalization is inconsistent, as it uses book value while the waterfall reflects market equity value

Analyst Sentiment Breakdown

Analyst sentiment on Skeena is constructive, with many firms expecting an imminent re-rating over the next 1–2 years

Key Value Levers

Full Permitting

- As of February 3, 2026, Skeena has received full permitting to ramp-up construction for the Eskay Creek project

Refinancing Catalyst

- Analysts expect Skeena to continue re-financing the Orion loan facility with high-yield bonds to fund a partial buyback of the Orion gold stream

Asset Fundamentals

- As the mine continues its development, analysts expect re-rating driven by strong fundamentals of the project (low cost, high grade, sizeable production)

Analysts expect several key catalysts to trigger an upside re-rating of Skeena over the next 12 months

Streets Target P/NAV

Target vs Price Over Time

Street Ratings Summary

While we are bullish, our target remains in line with street consensus, which has a strong track record of accuracy

Sources: Analyst Reports, Bloomberg, Company Filings

Fed Expectations

Federal Reserve decisions are a key driver of gold prices, as policy rates and gold have historically exhibited an inverse relationship

Lower End of Target Rate Expectations (bps)

Fed trajectory plays a key role in determining the direction of gold prices

Source: CME FedWatch Tool

QuestEx Acquisition Breakdown

Skeena acquired QuestEx Gold & Copper to expand their land package in BC's Golden Triangle

Deal Rationale

Expand Land Package

- Following this acquisition, Skeena now holds one of the largest land positions within BC's Golden Triangle, totaling 84,889 hectares

Exploration Synergies & Potential

- Proximity of QuestEx's KSP and Kingpin assets to Eskay Creek and Snip creates meaningful exploration synergy and portfolio upside

Minimal Shareholder Dilution

- The mix of cash and shares limits dilution to under 2%, with the cash portion effectively offset by proceeds from the Newmont transaction

Transformational, low-dilution land expansion materially enhances Skeena's scale and exploration upside in the Golden Triangle

SKE Investor Reaction

Financing Breakdown

Per Share & Premium

Skeena funded the QuestEx acquisition with cash and equity, avoiding new debt while minimizing dilution

Skeena Sentiment Analysis Methodology

How ProsusAI's FinBERT model was used to analyze natural language sentiment around Skeena

Methodology 1 (Data Collection and Preparation)

Data Collection:

- Text was collected across multiple disclosure and news channels:
 - Yahoo Finance and NewsAPI: headlines and articles by ticker (SKE)
 - Bloomberg equity research reports and PDFs
 - SEC Filings (U.S.): 10-Q and 8-K (Items 2.02, 7.01, 8.01)
 - Other filings/reports (MD&A, 6K, Company Presentations, etc)

Data Cleaning and Preparation:

- Data sources are cleaned, stripped, and prepared for text extraction
- All sources are classified, validated, chunked into 512 tokens bits, and aggregated into a pandas DataFrame in python through a [proprietary software program](#)

Methodology 2 (Running FinBERT)

Running FinBERT:

- Text with high neutrality or bias is filtered out with a 27m parameter all-MiniLM-L6-v2 model from HuggingFace through semantic clustering
- **FinBERT model is ran on the pandas DataFrame in batches, outputting:**
 - Net sentiment score per document (positive – negative)
 - Chunk-level sentiment breakdown with section labels
 - Interactive bar chart and pie chart in browser
 - Downloadable Excel workbook (3 sheets: summary, chunks, rejected)
 - Rejected documents log with reason
- See demo [here](#)

What is FinBERT?

- FinBERT is a pre-trained Natural Language Processing (NLP) model to analyze sentiment of financial text
- It is built by further training the BERT language model in the finance domain, using a large financial corpus and thereby fine-tuning it for financial sentiment classification (Araci, 2019)
- For more details, please see the paper [FinBERT: Financial Sentiment Analysis with Pre-trained Language Models](#)
